

HACKERS EXPOSED

COMPARING THE 7 TYPES OF HACKERS

SCRIPT KIDDIES

Don't really care about hacking into systems and stealing things. They simply copy code and use it for a virus, SQLi or something else.

WHITE HATS

They help you remove viruses, perform pen tests and help people understand where their vulnerabilities are and fix them.

BLACK HATS

They find banks and big companies with weak security systems and steal credit card information, confidential data or money.

GREY HATS

They spend most of their time just playing around with systems, without doing anything harmful.

GREEN HATS

They are new to the game and mainly use script, like Script Kiddies, but they have aspirations of becoming full blown hackers.

RED HATS

They use many different aggressive methods to force the crackers out and potentially even kill their computer.

BLUE HATS

They will seek vengeance on anyone who has made them angry. Most Blue Hat hackers are fairly new to the hacking world.
